Abstract (en)

[origin: WO0108743A1] Apparatus (20) is provided for use in filtering emboli from a vessel; and/or performing thrombectomy, and embolectomy. A vascular device (50) comprises one or more support hoops (263, 264) connected near a distal end of a guide wire (252), and a blood permeable sac (258) affixed to the support hoop or hoops to form a mouth of the blood permeable sac. The mouth of the sac closes when the apparatus is collapsed for removal to prevent material from escaping from the sac.
