Abstract (en)
[origin: DE10000554A1] The invention relates to a washing installation for printing press cylinders. Said washing installation comprises a free-wheel drive (22) of a dirty-cloth roller (12) which draws a section of a washing cloth from a clean-cloth roller (10) via a pressing element (18) onto the dirty-cloth roller (12) when a washing bar (4) that carries said components is returned from a washing position to a base position, thereby engaging a cloth transport lever (28) of the free-wheel drive with a first stop that is fastened to a holding device in which the washing bar (4) is guided. When the washing bar is inserted in the guides of the holding device, a lever arm (38) of the cloth transport lever (28) engages with a second stop that is provided on the holding device, thereby moving the cloth transport lever (28) past the first stop (26) without engaging with it and simultaneously effecting an advance of cloth from the clean-cloth roller (10) to the dirty-cloth roller (12).
