Abstract (en)
[origin: WO0150065A1] The present invention relates to a gas burner particularly suited for gas heating appliances for cooking food. In particular the present invention comprises a generally circular moulded body (100) including gases inlet (106) and an internal cavity (114). The internal cavity (114) is covered by a substantially transparent glass cap (108), which also bounds on the gas outlets (116). In this fashion, due to the transparency of the glass cap (108) at low flame improve controllability and safety are achieved by visual feedback of the flame size.
