Abstract (en)

[origin: WO0152363A1] The invention relates to an electric connector comprising a contact housing (2) having electrical contacts (K) for contacting contacts that are contained in said connector and engage with said connector. The inventive connector also comprises a guide sleeve (3) which is held by the contact housing (2) and is designed for penetrating an assembly opening (23) that is inserted into a wall (GW). The guide sleeve (3) engages into a receiver (15) for the guide sleeve, whereby said receiver pertains to the contact housing (2). The guide sleeve is locked in said receiver (15) by means of a locking member (7). The connector (1) is fixed to the wall (GW) after the assembly thereof. The inventive connector is characterised in that the guide sleeve (3) is arranged in said receiver (15) of the contact housing (2) in the axial direction and in a such a way that said sleeve is supported. The guide sleeve is provided with a locking stop (18) at a distance from said support arrangement. The locking stop acts against the effective direction of the support arrangement. A locking member (7; 8a; 9a) that is spring elastic in the axial direction of the guide sleeve (3) rests on said stop and rests on a stop (19) that serves as an abutment and belongs to the contact housing, for impinging upon the support arrangement of the guide sleeve (3) with a pretension.
