Abstract (en)

A physiotherapy apparatus for stretching the rear muscles comprises two surfaces (1a,1b) which are fastened together by means of hinges (6) and on which a patient (P) rests respectively his/her torso and legs in a supine position, and movement means (2) which can be directly operated by the patient (P) and are able to modify the position of one surface (1a) with respect to the other surface (1b), without interrupting the use of the apparatus itself. <IMAGE>
