Abstract (en)
[origin: EP1245376A2] A device for applying an embossing to a web of tissue paper (12) comprises a full width anvil roller (14) and a plurality of small widths embossing rollers (16) which are rotationally movable around rotational axes which run parallel to the rotational axis of the anvil roller. The embossing rollers (16) have a width which is substantially smaller than the width of the anvil roller (14) and can be individually positioned against the anvil roller. <IMAGE>
