Abstract (en)

[origin: EP1245506A1] The cosmetic packaging and dispensing device comprises a container (2) fitted with a dispensing element (5). An activation part (6) moves along the dispensing element longitudinal axis (X). A dispensing head (10) is mounted on the container via a band (20). The dispensing head comprises an activating part (40) which moves relative to the band, the coupling between them being such that rotation of the activator causes displacement of the activation part along the axis and the dispensing of the product through an outlet orifice (46) in the dispensing head.
