Abstract (en)
[origin: EP1245729A1] To transfer a moving paper web or web leader (9) between a web guide surface (6a) at a preceding workstation to a web carrier (22), at least one short burst of a high energy air jet stream from an edge jet (21) detaches the web from the guide surface. At the same time, the jet stream cuts the web or leader laterally, so that the new leading edge of the web or leader can be picked up by the web carrier. The jet stream has a duration of 0.05-0.5 seconds at a pressure of 7-10 bar. and with a jet stream speed in the sonic range.
