Abstract (en)
[origin: EP1246218A2] An additional switch containing a micro-switch (7) fits on a rear narrow edge (47). A wiring switch device (40) has a groove/strip running parallel to the narrow edge. On the rear wall of an additional switch casing (1) projecting wall sections are molded parallel to wide sides towards the narrow edge and adapted to the groove/strip so that the additional switch casing is pushed in from the front to fit vertical to a fastening surface on the narrow edge.
