Abstract (en)  
[origin: WO0148238A2] Disclosed is a method for determining whether a test compound is effective for a chemotherapy. The inventive method comprises the following steps: a) a DNA sequence is provided, whereby said sequence comprises site AP-1 represented in figure 5A as a constituent of a promoter, preferably promoter CD95L, which is functionally linked to a reporter gene or the CD95L gene, b) the DNA sequence a) is brought into contact with the test compound in a cellular assay, and c) activation of the promoter is determined, said activation indicating that the test compound is effective for a chemotherapy.
