Abstract (en)

[origin: US6666496B2] The invention relates to a device for fixing an insert (10) in an opening of a carrier. The opening is defined by a and second carrier edge (21, 22). First and second edge areas (11, 12) appurtenant thereto and pertaining to the insert (10) are pressed against the opening in the case of fixing. According to the invention, the two edge areas of the insert (10) can be fixed essentially free from backlash and by means of a clamping device that consists of two clamping strips (60) which, preferably in a connected configuration, embrace the shell-shaped housing (13) in a waist-like manner.
