Abstract (en)
[origin: WO0038495A2] According to the invention, a remote control for a hearing aid is integrated into the housing (1) of a wristwatch with a wristwatch strap (3). The antenna arrangement (5), which is configured as a coil arrangement, is configured in such a way that a field such as that of a dipole (P) is generated, said dipole (P) being essentially oriented in the direction of the wristwatch strap. This essentially guarantees a reliable communications connection with a hearing aid in situ.
