Abstract (en)

[origin: EP1247615A2] At least one machining piece (5) is brought in contact by a drive mechanism (6) with the corresponding parts of the cutting tool. The machining tool is set in relative motion with the part of the cutting tool being machined and in relation to the surface and or edge being machined. The machining appliance (4) has at least one elongated and cylindrical cutting tool set in rotary movement on an axis parallel with the lengthwise extension.
