Abstract (en)  
[origin: EP1247715A1] Pulling and pushing device comprises a central coupling rod (1) fixed to a rail vehicle on both sides using a fixing device (5) provided with a hinge (7). The rotating point (29) of the hinge of each fixing device lies in the region of or behind a power inlet surface (26) via which collision forces are conveyed from the coupling rod to each fixing device. Devices are arranged between the power inlet surface and the coupling rod to push the power transfer center of gravity for collision forces in the deviating direction of the coupling rod. <??>Preferred Features: The power inlet surface is arranged on the front side of a fixing device by which the fixing device is fixed to the rail vehicle. The fixing device has a flange (8) on which the power inlet surface is arranged.
