Abstract (en)

[origin: EP1248067A1] The automatic loading device comprises a tubular reception container (17,18) for a projectile and modular charges. A vehicle (1), constituted by a carriage (9), comprises two container housings (16a,16b) and supports able to allow passage of the carriage from an initial gun loading position to a final loading position in which the projectile housing and then the modular charge housing are led successively into position.
