Abstract (en)

[origin: EP1118300A1] The soap dispenser includes a tubular pump (18) held in a tubular abutment (14). A horizontally guided piston (40) meets the abutment orthogonally. A guide sleeve (16) projecting out of the abutment encloses the tubular pump in part on the piston side with keyed engagement. Recesses are provided in the guide sleeve so that the piston can pass through to operate the pump. The piston is mounted for articulated movement on a single-arm operating lever (24) which has a resetting spring formed by a bent spring wire engaging at its two ends in a side guide of the lever..
