Abstract (en)

[origin: WO0153115A1] The invention concerns a fountain pen comprising a nib (3) having a longitudinal slot (6) supplied with ink by capillary action. Said slot (6) comprises proximate to the end of the nib (3) designed to be in contact with paper, an orifice (5) with sufficient cross-section to interrupt the capillary ink flow into the slot (6), a strip being positioned in contact with the surface of the nib (3) so as to be mobile between a position wherein, said strip (2) covers said orifice (5) to allow ink flow and a position wherein, the strip (2) is cleared from said orifice (5) to interrupt ink flow.
