Abstract (en)
[origin: WO0134502A1] The present invention discloses a container with a height exceeding the normal container heights for air-freight. The increased ceiling height is provided in a central part (22) of the container, while portions (24, 26, 28) with reduced height is provided at least along one of the side walls (12, 14) and one of the end walls (16, 18), extending along the entire wall length. The container is made by a framework of profiles connected by thermally insulated panels. The profiles are preferably produced in two major metallic parts, interconnected by polymer connection profiles. The container is sealed for obtaining clean room conditions during transportation. A control compartment (44) is provided at one end of the container. A blow out panel (48) is provided at the wall separating the cargo compartment (50) from the control compartment (48).
