Abstract (en)

[origin: WO0147821A1] Disclosed is a method of protecting glass fiber preforms and glass precursor elements for making optical fiber preforms and ceramic mandrel deposition substrate preform or glass precursor element or ceramic mandrel is stored within a protective bag. The protective bags can be employed to protect any glass precursor element used in making optical fiber preforms, for example, glass core canes, glass tubes, or the optical fiber preforms themselves, or a ceramic mandrel deposition substrate used to deposit porous glass soot on during preform manufacture.
