Abstract (en)

[origin: WO0153704A1] A device (5) for the transfer of energy based upon the use of rotating masses/a pressurized medium in a device, which includes, for example, two wheels (1,2) or the equivalent, in which one has protrusions or arms (5), and the other has components (6) that receive and lock in place the protrusions or arms (5), such as channel-like or cup-like components. The arm (5) is formed particularly as an articulated structure. The introduction of the pressurized medium into the interior of the intermediate component (5) endeavours to straighten and extend it.
