Abstract (en)

[origin: WO0238981A1] The invention concerns a torque transmission device, in particular for motor vehicle, comprising a primary flywheel (10) driven in rotation by a driving shaft (12), a secondary flywheel (20) consisting of a single piece and linked to a driven shaft (24) by a clutch (22), output means (32) of the torsional damper bearing a friction washer (44) of the torque limiter and being mounted with a radial clearance relative to the secondary flywheel for automatic self-centring during maximum angular displacements of the torsional damper.
