Abstract (en)
[origin: WO0150064A1] The invention relates to a gas burner for a fireplace, comprising: a foot for fixing in the fireplace; an elongate holder connected to the foot; a burner for connecting to a gas supply of the fireplace and extending along the holder; and a log-like block arranged in at least one direction of view in front of the burner and on the burner and of substantially incombustible material with a length sufficient for approximately complete concealment of the burner, wherein the burner comprises a number of outlet openings at preselected positions through which gas from the gas supply flows out of the burner during operation of the gas burner.
