Abstract (en)  
[origin: WO0153762A2] The invention concerns a refrigerating apparatus comprising a cabinet with an opening towards the refrigerated part of said cabinet, the opening being covered with at least a panel framed with at least a framing element including at least a profiled section having first and second parts forming more or less an L-shape, the first part covering the panel edge and the second part covering the panel edge and comprising a recess provided with at least a butt-end. The resulting refrigerating apparatus exhibits a very simple structure, in particular the panel, and offers the constructor great structural flexibility when deciding on the final shape of the panel.  
[origin: WO0153762A2] The invention concerns a refrigerating apparatus comprising a cabinet (2) with an opening (3) towards the refrigerated part of said cabinet (2), the opening (3) being covered with at least a panel (5', 5", 5''') framed with at least a framing element (8) including at least a profiled section (11) having first (11a) and second (11b) parts forming more or less an L-shape, the first part (11a) covering the edge of a panel surface (4) and the second part (11b) covering the panel edge (5a') and comprising a recess (111) provided with at least a butt-end (11b'). The resulting refrigerating apparatus exhibits a very simple structure, in particular the panel (5', 5", 5'''), and offers the constructor great structural flexibility when deciding on the final shape of the panel (5', 5", 5''').
