Abstract (en)

[origin: EP1249212A1] The sachet (11) is made from two layers of a thermoplastic material joined by welded seams to form a pouch (12) with two long and two short sides. One of the short sides has an inlet (14) for filling, and the other an outlet duct (16) to receive a telescopic insemination tube (3) with a spherical tip (7) and a foam plug (6). The outlet duct has sections with two different diameters (D1, D2), with the smaller one nearest the sachet cavity, and the sachet has a peel-open zone (18) adjacent to the outlet duct, sealed e.g. with wax.
