Abstract (en)

[origin: EP1249402A1] The packaging is made from a blank comprising several parts connected by folding lines. In the first part (12) is a pre-cut (72) defining a tongue (78) which forms a handle. The tongue is connected at one end (78a) to a first portion (84) of a second part (16) forming a flap which is folded down against the inside of the first part. When the tongue is partially detached from the package the first portion articulates along a folding line (86) facilitating the gripping of the tongue. There are two openings (92,94) in the first part at the tongue end connected to the flap which enable this first portion to articulate along the folding line.
