Abstract (en)
[origin: EP1249556A2] The profiled sheet structure (11), as a roof cladding, has a cladding surface (19) between two upright and beaded stems (29,30). A mounting flange (27) lies flat on the support structure, with at least one row of elongated holes (33) in a grid interval of maximum 210 mm and preferably at 100 mm. This allows the profiled sheet structure to be fitted at any required point at the ridge of a trapezoid plate, or the mounting member of a Z-profile and the like. The beads are shaped by bending (17) and pressing around a head shaper.
