Abstract (en)
[origin: EP1249570A1] The door/flap closure unit has a sliding sleeve (22,24) which moves in relation to the body of the furniture or other housing. A locking pin (30) is rotated by the sleeve movements. The sliding sleeves are under spring (40) tension in the opening direction. The pin has a plug (32) which locks or releases the sleeves according to the rotary setting of the locking pin. The locking pin is fitted with side projections (34), which ride on angled surfaces at the sliding sleeves through their movement.
