Abstract (en)

[origin: EP1249679A2] The fixed gun carriage (1) has a silencer (14) with eccentric drives (5-8) enabling it to be finely adjusted laterally and vertically as part of the adjustment process for the barrel (2). Two drives, front and rear, enable the direction to be adjusted in the vertical plane (4). The other two drives act on a frame (9) supported on the foundation in the lateral plane (3).
