Abstract (en)

[origin: WO0151438A1] The invention relates to a two-step method for producing trimethylol alkanes of the general formula (I), $(\text{HOCH}_2)_3\text{C-R}$, wherein R represents methylol, C₁-C₁₂ alkyl, C₆-C₁₀ aryl or C₇-C₂₂ aralkyl, and simultaneously producing calcium formiate on the basis of an aldehyde of the formula (II), RCH_2CHO , wherein R has the meaning indicated above. In a first step, an aldehyde of the formula (II) and a formaldehyde are reacted in the presence of a base to give a 2,2-dimethylol alkanal of formula (III), wherein R has the meaning indicated above. In a second step, the compound of formula (III) is reacted with formaldehyde in the presence of calcium hydroxide. The invention provides a method for obtaining trimethylol alkanes of the general formula (I) with a high purity and in high yields.
