Abstract (en)

[origin: WO0144399A1] The invention relates to a shaped body consisting of substances for producing an aqueous binding agent system which contains preferably between 30 and 100 wt. % of water-soluble or water-dispersible inorganic or organic, natural or semi-synthetic polymers, which are non-adhesive in their dry state at an ambient temperature and between 0 and 70 wt. % of fully synthetic polymers as binding agents. Said shaped body is constructed of at least two different phases, of which at least one contains a dye and which are positioned in the shaped body in such a way that they can be optically differentiated on the surface of the shaped body. The dye is preferably decolourised during or after the production of the aqueous binding agent system.
