Abstract (en)

According to a low pollution liquid fuel and a method of manufacturing the same of the present invention, the independent use of the liquid fuel or the mixed use thereof with gasoline enables an effect and an output similar to or greater than those of gasoline to be obtained without the need of modifying the structure or the material of existing internal combustion gasoline engines. Further, the contents of the carbon monoxide (CO) and hydrocarbons(HC) contained in exhaust gases can be remarkably reduced as compared with those emitted when the gasoline is used. <IMAGE>
