Abstract (en)
A drafting apparatus includes a pair of first slides, a pair of second slides, and a pair of third slides. The draft apparatus includes a pair of roller stands. A pair of outer rods are fixed to the second slides. A pair of inner rods are fixed to the third slides. An adjusting shaft has pinions. Racks are formed on the outer rods. The racks mesh with the pinions. The outer and inner rods are fixed to the roller stands at locations that are rearward of the third slides. When the adjusting shaft is rotated, the outer rods move simultaneously. This is capable of facilitating the gauge adjustment and of making adjustment device relatively small. <IMAGE>
