Abstract (en)
[origin: EP1251216A2] Spatially braced flat molded component comprises humps directed downward and upward in an alternating manner. Square surfaces are formed on three planes parallel to each other. The humps have a uniform, regular, repeating shape which produces side surfaces of corresponding humps. Preferred Features: The square surfaces are arranged on more than three planes. The square surfaces are structured so that hollow chambers are formed when only the side surfaces of corresponding humps are in contact with each other.
