Abstract (en)

[origin: EP1251231A2] Window or door frame comprises a frame profile, a bearing region (40) on which a pane (98) lies, and a strip (132) arranged on the opposite side of the pane to the bearing region. A pressure element (100) arranged on the opposite side of the pane to the bearing region presses the pane against the bearing region. An Independent claim is also included for a process for producing the above window or door frame. Preferred Features: The strip is removably fixed to the pressure element. The frame profile is made of a solid body (12), especially wood, and a profile part (16) especially made of metal or plastic is fixed to the frame profile. The bearing region is formed on the profile part.
