Abstract (en)
[origin: EP1251478A2] Strut device comprises a strut (6) and at least one fixing device (7) for removably arranging the strut device between two holders placed a distance apart, especially between two holder struts. The fixing device is provided with an insert (10) having a first support on which a strut is fixed. The fixing device has at one end (8) of the strut a second support which is fixed to the first support of the insert arranged on the holder side in the region of the end of the strut between the holders and the strut. Independent claims are also included for a fixing device for a profile construction system for arranging a strut between two profile struts, and for a profile construction system comprising several struts and fixing devices. Preferred Features: The second support is arranged on a second insert of the fixing device. The second insert is removably connected to one end of the strut.
