Abstract (en)

[origin: WO0156796A1] The invention relates to an arrangement for emptying and filling of a hose (01) admitting a working fluid, whereby a working fluid from a pressure source (03) is firstly introduced into an outlet line. The hose to be emptied is now connected to the outlet line which has already admitted working fluid from the pressure source, by means of a switchable drain (11), such that the hose filling can be rapidly emptied.
