Abstract (en)

[origin: WO0155508A1] The invention relates to a system of building components for use in the construction of the foundation (1) for a roadway, a gas station, an assembly bay, a car wash installation, or similar constructions. The inventive system comprises a functional portion (3) that is supported on both sides by a supporting layer (2) and that receives supporting elements (4). Said functional portion is provided with respective through openings and support zones for conduits, roof element supports or the like. According to the invention, the support elements (4) and/or the adjoining functional portions (3) are designed as assembly units that are assembled from pre-fabricated individual elements.
