Abstract (en)

[origin: WO0157333A1] The invention concerns a component (1) for building wall elements or the like, comprising a cuboidal base element (2) that has one or more grooves (11) at least in one part of its periphery (5-10). A strip-shaped spring is used as connecting element (3,4) in said grooves (11) to ensure positive-fit connection of adjacent base elements (2) to one another. This makes it possible to produce a groove-spring type of connection between adjacent components (1).
