Abstract (en)

[origin: WO0157809A1] The invention relates to a terminal comprising a user interface and a transmitting device for wirelessly transmitting digitized voice, whereby the user interface of the terminal has a function with which a connection is established for wirelessly transmitting acoustic signals to a mobile device that is independent from the terminal. After the connection has been established, outputs of the user interface are transmitted to the portable mobile device in an alternate or additive manner.
