Abstract (en)
[origin: WO0154103A2] A tag (2) which is intended for provisional fastening to a holding part (18) on a shipping unit such as a sack or, in more recent times, a pallet container, for the marking of the destination of the unit and/or possible contents of the pallet container. The special aspect of the tag according to the invention is that the tag itself is configured with a projecting strip part (6), typically consisting merely of carton or other thin sheet or foil material, which serves as binding element when this strip part is configured with an outer locking head part (8, 10) which, after the winding of the strip part (6) around the relevant holding part (18), can be brought into locking engagement in a corresponding locking hole (12, 14, 16) in the tag (2). The tag can also appear as a finished sheet with pre-stamped contours for the individual tag for the printing of information in a computer-controlled printer, and where the tags are separated and applied after the printing.
