Abstract (en)
[origin: WO0139180A1] Systems and methods are disclosed to capture (103) an enabling portion of a voice and then create a voice template (127) or profile signal which may be combined at a later time with noise of another origin to reconstitute the original voice. Such reconstituted voice may then be used to speak any form or content provided via digital input thereto, and to say content which was not spoken in an original form by the original voice. Products and processes for online use are disclosed, as are certain business methods and industry applications.
