Abstract (en)

[origin: EP1252935A2] The method involves computing the required quantity of coating material in a control system prior to the coating process. The control system simulates the operation of the coating machine during the subsequent coating process including the movement processes. The quantities computed by the simulation are corrected by factors with which the known operating conditions arising in reality can be taken into account. Independent claims are also included for the following: a control system for operational control of a coating system.
