Abstract (en)
[origin: EP1253106A1] A device for handling of a hose (5), which device allows the hose (5) to be pulled out from a hose storage space (6) and is adapted to return the hose (5) to the hose storage space (6). The device comprises a hose returning means comprising a rocker unit (9) which, to allow pulling out and returning of the hose, is pivotable relative to the hose storage space (6) about a pivot axis (12) and which comprises a hose supporting part (11) which is arranged at a distance from the pivot axis (12) and adapted to support the hose (5). Moreover, a method for handling of a hose as well as a fuel pump assembly are described. <IMAGE>
