Abstract (en)

[origin: EP1253263A2] A supporting element of a modular structure for making mouldings along buildings' walls comprises a first plate (8) to be rigidly fastened to a wall of a building by a fastening face (8a) thereof turned towards the wall itself; at least one second plate (12) rigidly in engagement with the first plate (8), disposed on the face of the first plate (8) opposite to the fastening face (8a) and in a direction substantially perpendicular to said first plate (8); at least one coupling housing (13) formed in said second plate (12) and adapted to receive a connecting insert (7) of a modular-structure (1) end element (6) for making mouldings. <IMAGE>
