Abstract (en)
[origin: EP1253270A1] Wall extensions (7, 8) on the inner side of one of the profiled groove sidewalls (5) and on the outer side of the other groove side wall (6) are oriented in an identical manner. Likewise, the retaining protruding profiles on the outer fitting part (20) are oriented in an identical manner. The inner fitting part (17) has a width in the groove cross-direction corresponding to the maximum width of the groove mouth (3). The outer part is mounted by linear movement at right angles to the groove base (4) and then sliding in the groove cross-direction into an engagement position, where the protruding profiles grip around the groove side wall extensions. Independent claims are also included for (a) the frame profile, and (b) a method for assembling a frame from these profiles.
