Abstract (en)
[origin: US2003182817A1] The invention relates to a device for drying shoes, gloves or garments comprising a fan which produces an airflow and which is accommodated in a housing. The housing comprises two openings that are connected to two tube sockets which are arranged opposite one another and which are fastened to said housing. The tube sockets are connected to tubes for guiding the airflow. To this end, the tube sockets are angular and one end of each tube socket is rotatably connected to the housing while forming a swivel joint.
