Abstract (en)
[origin: WO0156746A1] The invention relates to a clamping device comprising a clamping rail (14) which is displaceably guided in its longitudinal direction; and an actuating device (12) which comprises a grip element (77) that can be displaced by means of the clamping rail (14). The aim of the invention is to produce a clamping device of this type with a high level of operating convenience. To this end, a first bearing element (46) and a second bearing element (48) are fixed on the clamping rail (14), the clamping rail (14) is displaceable in relation to the first bearing element (46) and the first bearing element (46) can rotate in relation to the actuating device (12).
