Abstract (en)
[origin: WO0158702A1] The invention relates to an antiskid protection device for motor vehicles. According to the inventive device, a rotating retainer flings chain strands between the tread of a tire and the road surface. A support (15) that is provided with compression rolls (12), guided in a guide (10) and moved back and forth by a flexible pressure tube (11) is used to transfer the retainer carrying the chain strands from its rest position to its operational position and back.
