Abstract (en)

[origin: WO0156900A1] The invention concerns a display rack package, wherein each of the two package elements (A, B) are provided with an edge, extending at least in the upper part and laterally, planar and parallel to an assembly plane of the two elements (A, B), so as to be urged in contact with each other and said edges are traversed, at least in their upper part, by aligned perforations (4a, 4b), while the closing means comprise two injected plastic U-shaped side panels (D, C) whereof the branches (7a, 7b, 8a, 8b) match the shape of the upper part of the top (3a) and side (3b) edges of the two elements (A, B) which they enclose between them, the branches (8a, 8b) of one (D) of the side panels being traversed by perforations (10a, 10b), while the branches (7a, 7b) of the other side panel (C) are provided with tenons (12a, 12b) projecting perpendicularly to the assembly plane of the two elements and capable of being interlocked with the perforations (10a, 10b) of the other side panel after passing through the perforations (4a, 4b) of the edges of the two elements (A, B).
