Abstract (en)  
[origin: WO0155105A1] The present invention relates to new therapeutically active and selective inhibitors of the enzyme DPP-IV. Novel 2-substituted unsaturated heterocyclic compounds are provided, wherein a nitrogen atom in the heterocyclic ring is attached via an amide bond or a peptide bond to an amino acid or an amino acid derivative. These compounds are potent and selective inhibitors of DPP-IV, and are effective in treating conditions that may be regulated or normalised via inhibition of DPP-IV.
